This course will strengthen the capacity of clinical staff to manage HCV in their setting. Through online learning and a face-face workshop, delivered by local experts, participants will gain the skills to confidently manage HCV. This workshop is designed for Addiction Specialists, General Practitioners, Nurse Prescribers, Pharmacist Prescribers and other clinical staff working with people who inject drugs.

People who inject drugs (PWID) represent approximately 90% of newly acquired hepatitis C (HCV) infection. Clinicians working with PWID play an important role in reducing HCV-related morbidity and mortality through early diagnosis and treatment.

With the advent of new well-tolerated, short-course direct acting antiviral (DAA) HCV regimens with cure rates >95%, there is a chance to vastly improve the health outcomes of people living with HCV.

### Date:
Tuesday 12 June 2018

### Time:
8:30am - 4:30pm

### Venue:
Venue TBC, Bristol

### Cost:
The course is free of charge; catering is provided. Places are limited - registration is essential.

### Speakers:
TBC

### Registration link:

### Register before:
5 June 2018

### Travel scholarships are available.
For information contact info@inhsu.org

At the conclusion of this program, participants will be able to:

- Describe the risk factors for HCV infection, enabling effective practice screening processes and prevention education
- Demonstrate competence interpreting clinical information to effectively diagnose HCV
- Demonstrate competence in liver disease assessment
- Demonstrate understanding of DAA therapy for the treatment of HCV and competence in selecting and prescribing appropriate therapy or referral to specialist care as appropriate
- Monitor patients on treatment and post-treatment appropriately

A limited number of travel scholarships are available - contact INHSU for more information.
