HEPATITIS C INTERVENTION IMPLEMENTATION SYMPOSIUM

Join us for a Symposium on the practical aspects of implementing innovative interventions for hepatitis C virus (HCV), including point-of-care testing, reflex testing, telehealth, peer support, patient navigation and case finding.

This symposium will showcase best practice models of care, highlighting key research, challenges and learnings in a collaborative environment, with the aim of supporting participants to develop or enhance their own HCV models of care

It is intended for anyone working with people who use drugs, interested in implementing or scaling up interventions for HCV in their service setting, including doctors, nurses, frontline workers, peer workers, program managers, pharmacists, and policymakers from a variety of settings.

By the end of this symposia, you will be able to:

1. Identify areas for enhancement or scale up in your own HCV service delivery
2. Understand how a variety of interventions for HCV work
3. Identify suitable interventions to enhance HCV service delivery
4. Describe how interventions can be implemented in your service setting
5. Analyze possible barriers to implementing interventions and how to overcome them

There are three elements:

1. The practical sessions in the symposia draw from our HCV Intervention Toolkit
2. The symposia will bring these interventions to life, providing the practical skills and knowledge needed to implement or scale up interventions in your service
3. Post-training, participants will have access to an ongoing community of support

Date: Thursday, April 4, 2024

Time: 1:00pm-6:00pm

Location: Gaylord Texan Resort & Convention Center

Cost: This event is being delivered as a satellite course prior to the ASAM 55th Annual Conference.

Attendance is free, but places are limited and granted on a first-come, first-served basis. Registration is essential.
